

Climate Change Risk Response Strategy

Faced with the threat of extreme climate disasters and the increasingly stringent requirements of low-carbon sustainable standards, assessing the risks and opportunities brought about by climate change and embarking on energy conservation and carbon reduction management have become important issues for the company to solve. We are committed to the following strategies as the highest guiding principles for climate change:

1. Comply with local laws and regulations and respond to international climate initiatives

Comply with or even exceed the local greenhouse gas and carbon management laws and regulations, respond to the international carbon disclosure project questionnaire and the brand's perpetual disclosure requirements for suppliers to meet customer needs or local social expectations

2. Implement climate hazard advocacy and promote climate risk action

Convene senior management personnel of the Corporate Social Responsibility Committee and all relevant department heads to promote the importance of climate change issues and the urgency of managing climate risks, establish employees' concept of sustainability, and convey the determination of enterprises to respond to climate risks.

3. Assess major climate risks and identify potential climate opportunities

Identify the risks and opportunities brought by climate change to each production base of the company

Assess potential business and financial impacts on the company against significant risks and opportunities

4. Establish a risk management system and develop management performance indicators

According to the impact ranking results and internal target management schedule, set short, medium and long-term energy saving and carbon reduction targets

5. Formulate risk response measures and implement energy conservation and carbon reduction programs

Reduce equipment energy consumption and improve energy efficiency

Strengthen greenhouse gas reduction management and promote low carbon process

Planning climate change response and prevention programs to strengthen corporate climate resilience
